Subject: Sunswyck 2 Lot Subdivision, *-49 Sunswyck*

Soil test data submitted by DiVesta Engineering demonstrate the site has the capability of supporting Code complying septic systems in the locations shown, along with the bedroom counts noted on the plans. The site has limitations posed by shallow depth to ledge and steep slopes so oversight of construction by the design engineer will be a requirement of plan approvals for construction issued by this office

Please contact me if there are any questions.
