Dear Neighbors,

Public safety and health is the primary role of government. Darien’s emergency personnel and first responders (Darien Police, volunteer fire personnel, and Post 53 EMS service) along with the Darien Health Department, Department of Public Works, and the First Selectmen’s office, are actively engaged in preparing for timely response to a wide variety of emergency situations.

In an effort to assist you and your family prepare for emergencies, the Town of Darien has created this useful guide to emergency preparedness. Please take time to review this guide with your family and others in your care and fill out the personal information forms so that the information you will need in times of emergency can be at your finger tips.

This Darien Preparedness Guide, along with detailed home planning and the advanced preparation of useful emergency kits can help make and emergency much easier to manage.

Sincerely,

**Jayne Stevenson
First Selectman
Town of Darien**

Office of Emergency Management

**Deputy Fire Marshal / Emergency Management Director
Marc McEwan - mmcewan@darienct.gov
Office of the Fire Marshal, Room 117
Darien Town Hall - 2 Renshaw Road - 203-656-7345
Open Monday - Friday 8:30am - 4:30pm
<http://www.darienct.gov/oem>**

**Chairman, Marc McEwan, Emergency Management Director
Jayme J. Stevenson, First Selectman**

Town and Departments and Services	Community Organizations:
Darien Fire Department	Darien Red Cross
Noroton Fire Department	Darien Community Fund
Noroton Heights Fire Department	Post 53
Department of Health	CERT
Department of Public Works	Elected Offices:
Human Resources	Moderator of the RTM
Social Services	Public Safety Committee of the RTM
Darien Police Department	

The original guide was made possible through the financial support of the Town of Darien, The Community Fund of Darien and the Darien Red Cross, as part of the **"Darien Emergency Preparedness Week Project."** This booklet was updated in 2012 to provide you with the most current information available.

DEVELOP A DISASTER PLAN

Develop a disaster plan with your household members. Prepare for what to do, how to find each other, and how to communicate in an emergency.

Decide where your household will reunite after a disaster.

Pick two meeting places:

- One right outside your home, such as by your neighbor's mail-box, in case of a sudden emergency.
- Another outside your neighborhood such as the library, community center or home of a friend in case you can't access your home or neighborhood. Everyone must know the address and phone numbers of the meeting locations. Provide wallet-sized cards for this purpose.

- Account for everybody's needs, especially seniors, people with disabilities and non-English speakers. Because local phone circuits may be busy, an out-of-town or out-of-state contact may be your best way of communicating between separated household members.
- Know and practice all possible exit routes from you bedrooms, home and neighborhood. Practice your plan with all household members. Account for everybody's needs, especially seniors, people with disabilities and non-English Speakers

PREPAREDNESS KITS ARE THE BASIS FOR EMERGENCY SUPPLIES

While the materials included in the kits are a good start, there is no kit that can provide all the supplies. Your kit should be customized based on your own households needs. Use a sturdy, easy to carry container such as a backpack or suitcase on wheels. Rethink your kit and individual needs at least once a year. Ever six months replace food and water, replace batteries, update clothes, etc. Keep your supplies easily accessible in case you must leave in a hurry. Keep small kits in your car or at work. For more information, please visit the Red Cross website at: http://www.redcross.org/services/disaster/be_prepared.

Clothing and Bedding

- At least one complete change of clothing and footwear per person.
- Sturdy shoes or work boots
- Rain Gear
- Blankets or sleeping bags
- Hat and gloves
- Thermal underwear

Tools and Supplies

- Flashlight and extra batteries
- Mess kit, or paper cups, plates and plastic utensils
- Cash, change (at least \$50-\$100 on hand)
- Non-electric can opener, utility knife
- Tent, work gloves
- Pliers, screwdrivers
- Tape
- Matches in waterproof container
- Cans of Sterno
- Aluminum foil
- Paper, pencil
- Needles, thread
- Medicine dropper
- Shut-off wrench, (to turn off household gas and water)
- Plastic sheeting, plastic storage containers
- Maps of area
- Battery operated or windup type radio, extra batteries
- Whistle
- First Aid Kits for home and cars. Be sure to include enough supplies for all members of your family.

Sanitation

- Toilet paper, towelettes, toothbrush, toothpaste
- Soap, liquid detergent, comb, brush
- Feminine supplies
- Plastic garbage bags, ties
- Plastic bucket with tight lid
- Disinfectant
- Household chlorine bleach

Water

- Store one gallon of water per person per day (two quarts for drinking, two quarts for food preparation/sanitation). Note: Hot environments and intense physical activity can dramatically increase the amount of water that a person needs to drink.

To disinfect water

- Remember that water other than your personal supply might not be safe. Keep bleach on hand or iodine tablets and an eyedropper (for adding bleach to water). See page 14 for further information if this becomes necessary.

Food: Keep in a cool dry place

- Ready-to-eat foods that you normally eat, including canned meats, fruits, milk, vegetables, canned juices, soup (if soup or milk is powered, store extra water).
- High energy foods-peanut butter, jelly, crackers, granola bars, trail mix.
- Vitamins
- Comfort/stress foods-cookies, hard candy, sweetened cereals, instant coffee, tea bags.

Special Items

- Medications (both prescription and non-prescription) that you take, including pain relievers, stomach remedies, etc. Keep a 7-14 day supply. Ask your physician or pharmacist about storing prescription medications.
- Extra eyeglasses
- Important family documents (in a waterproof, portable container).
 - Will, insurance policies, contracts, deeds, stocks and bonds
 - Passports, social security cards, immunization records.
 - Bank account numbers, Credit card account numbers, ATM and credit cards.
 - Important telephone numbers, and disaster plan contact information.
 - Inventory of valuable household goods, family records, (birth, marriage, death certificates).
- Entertainment games and books.
- Personal care supplies for persons with special needs, such as infants, children, elderly or disabled persons.
- Extra set of car and house keys.

PARENTS & FAMILIES

Include your children in planning for an emergency. Teach them how to get help and what to do in different situations. Practice your family emergency plan with your children and review with them every six months about what to do, phone numbers, meeting places, and safety rules.

EVERY CHILD SHOULD KNOW

When to call 911:

- If you are in immediate danger.
- If you witness a crime in progress.
- For a serious injury or medical condition.
- For any situation needing urgent attention.

Where to find help:

- Teach your children to call home or your designated family contact if they are separated in an emergency. Help them memorize the telephone numbers, or write them down on a card that they can keep with them.
- Explain that there are many people who can help them. Explain how a police officer, firefighter, teacher, neighbor, doctor, Red Cross volunteer or utility worker might help following an emergency or disaster.

Where to meet:

- Know your family's two meeting places: One right outside your home, such as by your mailbox, in case of a sudden emergency at home such as a fire, and the other location outside your neighborhood such as a library, community center or home of a friend in case you are unable to reach your home or neighborhood.

Safety rules:

- Matches and lighters are tools for "grown-ups." These tools help adults use fire properly. (Instruct children to tell an adult right away if they find them or see someone playing with fire, matches, or lighters.)
- Never touch wires lying on the ground or hanging from poles. High voltage lines can pose additional hazards if they contact other cables, metal fencing, or guard rails and travel with fatal consequences for long distances.

- Children should learn how to identify the smell of gas: If they smell gas or feel sick, they should tell an adult and immediately leave the building.

INFORMATION TO KNOW ABOUT YOUR CHILD'S SCHOOL OR DAY CARE FACILITY

- Learn the emergency plans at your child's school or day care.
- Find out where you should pick up your child if the school evacuates.
- Ensure that the school has your up-to-date contact information and at least one other relative or friend.
- Find out if you can authorize a relative or friend to pick up your children in an emergency.
- Talk to your neighbors about how you can work together in the event of an emergency.

CHILD'S GO BAG

- Pack child care supplies as well as games and small toys in your family's Go Bag.

REASSURANCE

- Children are particularly vulnerable to emotional stress after a disaster and may exhibit excessive crying, fear of the dark and being alone, and constant worry. Continue to reassure children that they are safe and encourage them to talk about their fears, emphasize that they are not responsible for what happened, and comfort them.

TIPS FOR PET OWNERS

Please note that pets are not allowed in most shelters (only service animals are allowed). It is important for you to have a plan for your pet in the case of emergencies.

PET PLANNING for EMERGENCIES

- Contact friends or relatives outside your area to see if they would be willing to accommodate you and your pets in an emergency.
- Check if your veterinarian or groomer provides shelter for animals during an emergency.
- Transport your pets in a sturdy carrier, this makes pets feel safer and more secure.
- Know your pets' in and out of the house hiding places so that you can easily find them in times of stress.
- Have collar(s), license(s), ID tag(s) and leash, plus proof of vaccinations for all your pets.
- If you absolutely must leave your pets behind, prepare an emergency pen in the home that includes a three-day supply of dry food and a large container of fresh water. Note most dogs eat all food put in front of them, cats eat only what they need.

ASSEMBLE A PET SURVIVAL KIT

Keep your Pet Survival Kit ready to go if you must evacuate your pet to friends, family or a kennel.

Include:

- A leash/muzzle/harness.
- A pet cage/carrier (a luggage carrier can be used to wheel the pet cage/carrier around).
- Pet food, water and medications plus can opener and food dishes in an easy-to-carry container.
- Cat litter box and litter.
- Plastic bags for pick-up.
- A copy of current veterinary records, license and microchip numbers.
- A current photo of your pet. This will assist identification should it become necessary.

SENIORS & PEOPLE WITH SPECIAL NEEDS

For people with special needs, preparing for emergencies may require a few additional steps. Those who are able please consider ways to help a friend or neighbors who may need some assistance.

SENIORS & PEOPLE WITH SPECIAL NEEDS

For example:

- Hearing impaired may need to make special arrangements to receive a warning.
- Mobility impaired may need assistance in getting to a shelter. Keep in mind elevators will not work in a power outage. Technologically dependent people should check in with 911 or their doctors.
- Households with a single working parent may need help from others both in planning for disasters and during an emergency.
- Non-English speaking people may need assistance planning for and responding to emergencies. Community and cultural groups may be able to help.
- People with special dietary needs should have an adequate emergency food supply.
- If you are dependent on electricity for your wheelchair, breathing machine or any other life-sustaining device, plan for a loss of power. Consult your power provider.

IF YOU HAVE SPECIAL NEEDS

- Evaluate your capabilities, limitations, needs and surroundings to determine what type of support you may need in an emergency.
- Keep a 7–14 day supply of required medications, including portable oxygen tanks on hand at all times.
- Develop a personal emergency plan for each place where you spend time, at home, work, school, and in the community.

- If you think you may need assistance in a disaster, discuss your disability with relatives, friends, or co-workers and ask for their help. For example, if you need help moving or require special arrangements to receive emergency messages, make a plan with friends. Make sure they know where you keep your disaster supplies. Give a key to a neighbor or friend who may be able to assist you in a disaster.
- Include your home care attendant and other people in your network in your planning process.
- It is a good idea to write down your support needs, telephone numbers, medical conditions, medications and dosages, allergies, special equipment, and medical insurance, insurance cards as well as personal and medical contact details are important to have available. Keep this material with you in emergencies and supply a friend with a copy.

ADDITIONAL

- A list of doctors and emergency contacts.
- A list of the style and serial numbers of medical devices, such as pacemakers, in your emergency supply kits.
- Copies of medical insurance and Medicare cards.
- Keep available extra eyeglasses, batteries for hearing aid or wheelchair and other special equipment as needed in your supply kit.

MENTAL HEALTH

The emotional toll resulting from a disaster can sometimes be even more devastating than the physical damage. Discussing emergencies that result from disasters will help reduce fear and anxiety.

WHEN TRYING TO UNDERSTAND DISASTERS — A FEW THINGS TO REMEMBER

- No one who witnesses a disaster is untouched by the event.
- It is normal to feel anxious about your own safety and that of your family and close friends.
- Profound sadness, grief and anger are normal reactions to an abnormal event.
- Acknowledging your feelings helps you recover.
- Focusing on your strengths and abilities will help you to heal.
- Accepting help from community programs and resources is a positive and healthy thing to do.
- We each have different needs and different ways of coping.
- Children and the elderly are special concerns in the aftermath of disasters.

RELIEVING SYMPTOMS OF EMOTIONAL DISTRESS

- Take steps to promote your own physical and emotional healing.
- Try to get back into your normal household and daily routine of rest, exercise, eating and sleep. This healthy outlook will help you and your household.
- Spend time with people you enjoy, people who make you feel good about yourself.
- Provide extra attention and consideration to family and friends.
- Talk about your feelings with family, friends and neighbors.
- Get some physical exercise every day.
- If you continue to have the above symptoms for an extended period of time, think about consulting a mental health professional.
- Children are particularly vulnerable to emotional stress after a disaster. Encourage them to talk about their fears, emphasize that they are not responsible for what happened,

WEATHER DISASTERS

Weather is monitored closely by several government agencies. Severe weather should be taken seriously, since it can harm both you and your property.
Basic advice: Heed severe weather warnings early!

THUNDERSTORMS

Outdoors:

- Postpone outdoor activities if thunderstorms are likely. Postponing activities is your best way to avoid being caught in a dangerous situation.
- Take cover in building (or auto) immediately, but avoid trees, poles and fences.
- Stay away from metal objects such as umbrellas, baseball bats, fishing rods, camping equipment, and bicycles.
- If swimming or boating, get to land immediately. Get away from the water and the beach.

Indoors:

- Turn off appliances: computers, washers, AC and TV.
- Avoid handling metal, electrical equipment, telephones, bathtubs, water faucets and sinks because lightning can follow the wires and pipes.
- Avoid handling water in sinks, bath or shower.

Severe Thunderstorm Watch:

- There is potential for thunderstorms to form that can produce hail at least three quarters of an inch in diameter, have winds of 58 miles per hour or higher, or produce a tornado.

Severe Thunderstorm Warning:

- A severe thunderstorm is occurring.

TORNADOS (Often preceded by large hail):

- Every state is at some risk from this hazard.
- Go to basement, interior room, closet or interior hallway on the lowest floor.
- If caught outside without shelter, lie flat in a ditch or depression and cover your head with your hands.
- If told to take shelter, do so immediately.

Tornado Watch: A tornado could form in the next few hours.

Tornado Warning: A tornado has been reported and/or the National Weather Service radar has detected a tornado or indications of one.

PREPARING FOR MAJOR STORMS

- Fill your car's gas tank because if electric power is cut off, gas stations may not be able to operate gas pumps.
- Keep trees and shrubs trimmed away from power and phone lines to your home.
- Secure outdoor objects, such as lawn furniture and garbage cans that might become airborne and cause injury or damage.
- In extreme conditions, consider shutting off power and appliance gas switches to prevent damage to your appliances.

Also see Utilities Disruptions on page 15.

- Hurricane shutters provide the best protection for windows or doors. Next best: cover the outside of windows and sliding doors with plywood. Taping windows may take critical time from more effective preparedness measures. Taping windows may reduce shattering, but does not prevent them from breaking.

COASTAL STORMS

Coastal storms can cause severe damage and hazardous conditions. If you live in a low, coastal area, it is more likely that you will be directed to evacuate before a severe coastal storm or hurricane.

NOR'EASTERS:

Nor'easters are tropical cyclones not formed in the tropics that can cause heavy rain/snow, strong winds and coastal flooding.

- Nor'easters may occur at any time of the year but are most common during fall and winter months (September through April).
- Evacuations are unlikely for Nor'easters but the Town may open shelters during severe storms to offer people relief.

HURRICANES:

A hurricane is an intense tropical cyclone with sustained winds of 74 mph (64 knots) or greater.

- Hurricane season officially lasts from June through November.
- During hurricanes, residents in hurricane evacuation zones may be asked to evacuate. The Town will communicate

specific evacuation and sheltering information to the public through local media.

- Hurricane Watch: Issued when there is a threat of hurricane conditions in 24-36 hours.
- Hurricane Warning: Issued when dangerously high water and rough seas are expected in 24 hours or less.

FLOODS:

- Move to higher ground.
- Never try to walk through moving water; six inches of moving water can knock you off your feet.
- Never try to drive your vehicle through standing water; six inches of water will reach the bottom of most passenger cars causing loss of control and possible stalling.

SHELTER IN PLACE

Taking shelter may be a critical element in protecting yourself and your household in times of disaster.

- **In-place sheltering** is appropriate when conditions require that you seek protection in your home, place of employment, or other location where you happen to be when disaster strikes.
 - **The appropriate steps to take** depend entirely on the emergency situation. For instance, during a tornado warning, you should go to an underground room, if available. During a chemical release, on the other hand, you should seek shelter in a room above ground level. Because of these differences, listen carefully to emergency warnings and official instructions. *During a flu pandemic, public health officials may impose restrictions to prevent the flu virus from spreading. You may be asked to stay home for an extended periods of time even though you are not sick.
- Take shelter in a room that has few doors or windows. Ideally, a shelter-in-place room should allow at least 10 square feet per person.
 - Seal all windows, doors, air vents and fireplace dampers with plastic sheeting and duct tape (if possible).
 - Turn off all ventilation systems.
 - Get official news and instructions by radio, television or the Internet.
 - Do not use the phone—keep the phone line available for emergency calls.
 - Take your emergency supply kit unless you have reason to believe it has been contaminated.
 - Make use of your Go Bag and Emergency Supply Kit.
 - Store at least a two week supply of food, water, medications, etc.

IF YOU ARE ASKED TO SHELTER IN PLACE

Example: Chemical Emergency

- Go inside your home or the nearest appropriate facility (school, library, place of worship, etc.).

DISASTER SHELTERING

The Town will establish emergency shelters when disasters force large numbers of residents to leave their homes.

- If you can, shelter with friends or relatives outside the affected area.
- Town/Red Cross-run shelters will provide basic food, and water. Shelters may be set up in schools, municipal buildings or places of worship.
- If possible, take your Go Bag with clothing, bathing and sanitary supplies, special food and pre-filled prescriptions and other medications.
- Alcoholic beverages, firearms and illegal substances are not allowed in emergency shelters.
- Pets are not allowed in most shelters. Only service animals are permitted.

DISASTER SHELTERING GUIDELINES:

- In order to make a difficult situation less stressful you should always cooperate with shelter managers.
- Remember, shelter sites change based on the emergency so check The Emergency Information Line at 203-656-7472 for the latest information

EVACUATION

Evacuations are more common than many people realize. Hundreds of times each year transportation and industrial accidents release harmful substances, forcing thousands of people to leave their homes. Fires and floods cause evacuations even more frequently. And almost every year, people along the Atlantic coast evacuate in the face of approaching hurricanes.

Should it become necessary to evacuate your home or neighborhood, Town officials will tell you when through the media or direct warning. Evacuation is used as a last resort when a serious threat to public safety exists.

The amount of time you have to evacuate will depend on the disaster. You might have a day or two to get ready if the event, like a hurricane, can be monitored. However, many disasters allow no time for people to gather even the most basic necessities. This is why you should begin preparations now.

EVACUATE IMMEDIATELY WHEN YOU:

- Are in immediate danger.
- Smell gas or smoke.
- See fire.
- Are directed to do so by emergency officials

BE PREPARED TO EVACUATE:

Secure your home: close and lock windows and doors, and unplug appliances before you leave.

Teach all responsible family members how and when to turn off the water, gas, and electricity at the main switches or valves. Authorities will instruct you if it is necessary to turn off utilities.

Wear sturdy shoes and comfortable, protective clothing such as long pants and long-sleeved shirts.

Bring your Go Bag with you when you evacuate.

- Know your work and child's school evacuation plans.
- Remember, evacuation routes change based on the emergency so stay tuned to the local news, and
- **The Emergency Information Line at 203-656-7472** for the latest information.

CAR SAFETY

About 70 percent of winter deaths related to snow and ice occur in automobiles.

- Avoid driving during sleet, freezing rain, freezing drizzle, and dense fog - these serious conditions are often underestimated.
- To decrease your chance of being stranded in cold weather, keep your car winterized and in good condition.
- Keep your car's gas tank full for emergency use and to keep the fuel line from freezing.
- Keep a Go Bag in the trunk of your car.
- To prevent carbon monoxide poisoning, clear snow from your tail pipe before you start your engine.
- Also see [Carbon Monoxide on page 11](#).

HEATING SAFETY:

House fires occur more frequently in the winter due to lack of proper safety precautions when using alternate heating sources (unattended fires, disposal of ashes too soon, improperly placed space heaters, etc.).

- Freezing water supplies may also make it more difficult for firefighting equipment to get to a fire.
- Furnaces, boilers, hot-water heaters and clothes dryers should be working, ventilated and inspected by a professional regularly in order to prevent unintentional carbon monoxide poisoning.
- Electric heaters should be used with extreme caution to prevent shock, fire and burns.
- Materials near heaters should be kept at least three feet from the heat source to prevent fire.
- Gas ovens and burners should never be used to heat your home.
- If you are unsure whether your heat source is safe, ask your local fire station for a fire inspection.
- If you do not have heat, contact your building owner. If heat is not restored, call during normal business hours the Dept. of Public Health at (203) 655-7320 or after hours the Police Dept. at (203) 662-5300.

WINTER WEATHER TERMINOLOGY:

Freezing Rain Advisory: Minor accumulation of ice due to freezing rain is expected.

Winter Weather Advisory: A minor accumulation of snow, sleet and freezing rain is expected.

Snow Advisory: Accumulations of one to four inches expected within a 12-hour period.

Blizzard Warning: Strong winds, blinding driven snow and dangerous wind chill are expected in the next several hours.

Winter Storm Watch: Significant accumulation of snow and/or ice is possible within 36 hours.

Winter Storm Warning: A storm with six or more inches of snow/sleet/ freezing rain within a 24-hour period is expected.

TIPS TO KEEPING WARM:

Indoors:

- Dress efficiently: Layers of loose-fitting, lightweight clothing will keep you warmer than one bulky sweater. Adjust layers to avoid overheating, perspiration and subsequent chill.
- Eat regularly: Food provides the body with energy for producing its own heat.
- Keep hydrated: Drink lots of liquids such as warm broth or juices. Avoid caffeine and alcohol.

Outdoors:

- Wear a hat, scarf & gloves: Half of body heat loss is from the head. Protect your lungs from extremely cold air by covering your mouth. Mittens are warmer than gloves.
- Stay dry: Outer garments should be tightly woven and water repellent. Wet clothing loses much of its insulating value and rapidly draws heat away from your body.

AVOIDING INJURIES:

- Understanding wind chill: As wind speed increases, heat is carried away from your body at an accelerated rate, driving down your body temperature.
- Stretch before shoveling: To reduce your chance of muscle injury, warm up your body first with a few stretching exercises.
- Avoid overexertion: To reduce your chance of a heart attack, take your time shoveling snow, pushing a car or walking in deep snow. Also, sweating can lead to a chill and hypothermia.

WATCH OUT FOR SIGNS OF HYPOTHERMIA AND FROSTBITE:

FROSTBITE is a severe reaction to cold exposure that can cause permanent harm to people. A loss of feeling and a white or pale appearance in fingers, toes, nose, or earlobes are symptoms of frostbite.

HYPOTHERMIA is a condition brought on when the body temperature drops to less than 95°F. Symptoms include uncontrollable shivering, slow speech, memory lapses, frequent stumbling, drowsiness, and exhaustion. Hypothermia is not always fatal, but for those who survive there are likely to be lasting kidney, liver, and pancreas problems.

- If frostbite or hypothermia is suspected, begin warming the person slowly and seek immediate medical assistance.

Heat can kill or cause illness by pushing the human body beyond its limits.

Never leave children or pets alone in closed vehicles.

Temperatures inside a closed vehicle can reach over 140°F and can kill within minutes.

The duration of excessive heat plays an important role in how people are affected by a heat wave. Take added care when excessive heat lasts more than two days.

Heat waves are particularly dangerous for children, the elderly and the infirm: Make sure to check on your friends and neighbors, and offer them assistance.

People living in urban areas, especially those with respiratory difficulties, may be at greater risk from the effects of a prolonged heat wave than people living in rural regions.

Stagnant atmospheric conditions that trap pollutants in urban areas add unhealthy air to excessively hot temperatures. In addition, asphalt and concrete store heat longer and gradually release heat at night, which produces significantly higher nighttime temperatures in urban areas known as the “urban heat island effect.”

Keep hydrated: Drink plenty of non-alcoholic, non-caffeinated fluids.

Because men sweat more than women, they become dehydrated more quickly and are therefore more susceptible to heat illness.

Try to spend at least two hours per day in air conditioning.

Doing so reduces heat-related illnesses.

HEAT ILLNESSES

Heat-related illnesses can become medical emergencies. Call 911, especially in the case of heat stroke.

HEAT CRAMPS are muscular pains and spasms resulting from heavy exertion. Although heat cramps are the least severe heat-related illness, they are an early signal that the body is having trouble coping with heat and should be treated immediately with rest and fluids. Stretching or direct pressure can also reduce cramps. Unless very severe, heat cramps do not require emergency medical attention.

HEAT EXHAUSTION occurs when body fluids are lost through heavy sweating due to vigorous exercise or working in a hot, humid place. Symptoms include: sweating; pale, clammy skin; fatigue; headache; dizziness; shallow breaths; and a weak or rapid pulse. Victims of heat exhaustion are tired but not confused. The condition should be treated with rest in a cool area, drinking water or electrolyte solutions, elevating the feet 12 inches, and further medical treatment in severe cases. If not treated, the victim’s condition may escalate to heat stroke. If the victim does not respond to basic treatment, seek medical attention.

HEAT STROKE is also called “sunstroke.” The victim’s temperature control system, which produces sweat to cool the body, stops working. The skin is flushed, hot and dry, and body temperature may be elevated. The victim may also be confused, develop seizures, breathe shallowly and have a weak or rapid pulse. This is the most serious heat-related illness and people exhibiting these symptoms should seek emergency medical attention.

HEAT TERMS

- Heat Advisory: When heat index exceeds 100°F on two consecutive days.
- Heat Index: An indicator, in degrees Fahrenheit, of how it feels when humidity is factored into air temperature.
- Heat Wave: Prolonged period of excessive heat often combined with excessive humidity.
- Excessive Heat Warning: When the heat index is expected to exceed 115°F or when it exceeds 100°F for three or more hours for two consecutive days.
- Heat Watch: A long-term alert for excessive heat.
- Ozone Advisory: Issued when ozone levels are expected to exceed dangerous levels. People should be especially careful to avoid strenuous activity, especially those with respiratory problems such as asthma.

TIPS TO STAYING COOL

- Slow down and avoid strenuous activity.
- Avoid too much sunshine. Sunburn slows the skin’s ability to cool itself. The sun will also heat the inner core of your body, resulting in dehydration.
- When in the sun, wear sunscreen (at least SPF 15).
- Wear lightweight, light-colored, loose-fitting clothes that cover as much skin as possible to prevent sunburn.
- Protect face and head by wearing a wide-brimmed hat.
- Take frequent breaks if you must work outdoors.
- Use a buddy system when working in extreme heat. Exposure to heat can cloud judgment. If you work alone, you may not notice.
- Avoid extreme temperature changes. A cool shower immediately after coming in from hot temperatures can result in hypothermia, particularly for elderly and very young people. Give your body a chance to adjust to extreme temperature changes.
- Use shades or awnings.
- If your home has no air conditioning, go to pools or public buildings with air-conditioning each day for several hours.
- Check with the police routine telephone number (203-662-5300) to see if the town has opened a cooling center.

FIRE

Fires at home are the fifth leading unintentional cause of injury or death in the United States, behind motor vehicle crashes, falls, poisoning by solids or liquids, and drowning. Children are most likely to experience fire in the home. Fire ranks first as the cause of death for children under the age of 15.

If you see a fire or if your smoke detector goes off, **CALL 911**

- Remain calm
- Do not try to fight a major fire

If your clothes catch on fire, do not run! Running only makes the fire burn faster. Instead,

- **Stop** where you are,
- **Drop** to the ground, cover your face and
- **Roll** over and over to smother the flames.

Once the flames are out, cool the burned skin with water for 10 to 15 minutes and then get medical attention.

IF FIRE STARTS IN YOUR HOUSE or APARTMENT

- Get out as quickly and safely as possible.
- Do not stop to get anything.
- Feel doors with the back of your hand before you open them. If they are hot, find another way out. Stay as close to the floor as possible—smoke and heat rise and the air is clearer and cooler near the floor. Close doors behind you.
- Crawl low if there is smoke.
- Do not use elevators.
- Go to a previously designated meeting place. Account for your family members and carefully supervise small children.
- Send one person to call **911** from a safe place or a neighbor's house.
- **Never go back into a burning building.**
- Children are often concerned about the safety of their pets, so discuss this issue before a fire starts. Pets are often able to get out on their own.

- If you are unable to get out, stay near a window and close to the floor. Close the door and stuff the bottom with a towel to avoid smoke. If possible, signal for help by hanging a cloth or sheet outside the window.

IF YOU ARE IN A HIGH-RISE MULTIPLE DWELLING

- If the fire is not in your apartment, stay in your apartment rather than entering smoke-filled hallways.
- In high-rise office buildings, only evacuate if the fire is on your floor or the one above it, and descend to the second floor below the fire floor. Other occupants should remain on their floor and monitor the PA system for further instructions.
- Do not use the elevator.

TO PREVENT FIRES

- **Smoke alarms** dramatically increase your chances of survival as a result of a home fire. Install them outside each sleeping area and on each additional level of your home. Vacuum and test them monthly. Replace batteries at least once a year (at daylight savings time). Replace detectors every 10 years.
- **Fire extinguishers:** A home or apartment, ABC-rated fire extinguisher can stop several kinds of small fires.
- **Take extra precautions in winter.** House fires occur more frequently in the winter due to lack of proper safety precautions when using alternate heating sources (unattended fires, disposal of ashes too soon, improperly placed space heaters, etc.). Fire during winter storms presents a great danger because water supplies may freeze and it may be difficult for firefighting equipment to get to the fire.

EARTHQUAKES

Although earthquakes strong enough to feel are uncommon in Darien, tremors occasionally occur.

IN THE EVENT OF AN EARTHQUAKE

Indoors: Drop, take cover & hold on!

- Drop to the floor.
- Take cover under a solid piece of furniture or next to an interior wall. Cover your head and neck with your arms.

- Hold on to a sturdy piece of furniture and be prepared to move with it. Stay where you are until the shaking stops.

Outdoors:

- Get away from buildings, trees, streetlights, and power lines.
- Drop to the ground and stay there until the shaking stops.

BUILDING COLLAPSES OR EXPLOSIONS

Regardless of cause (structural failure or sabotage), the same guidelines apply.

IF YOU ARE TRAPPED BY DEBRIS

- Cover your nose and mouth with a cloth or clothing.
- Move around as little as possible to avoid kicking up dust, which is harmful to inhale.
- Tap on a pipe or wall so rescuers can hear where you are. Use a whistle if one is available. Shout only as a last resort, since

shouting can cause you to inhale dangerous amounts of dust.

IF YOU CLEAN UP DEBRIS

- Wear gloves and sturdy shoes.
- Do not touch debris that has utility wires in it.
- Do not move debris that is too large or too heavy. Ask for help from neighbors, friends and recovery workers.

POISON

IF YOU THINK SOMEONE HAS BEEN POISONED:

- **Act fast! CALL 911**
- **Don't wait to see what happens!**
- **National Poison Control Center at (800) 222-1222**

POISON

- The most common home chemical emergencies involve small children swallowing medicines.
- Keep all medicines, cosmetics, cleaning products and other household chemicals out of sight and out of the reach of children.
- Moving hazardous materials out of sight could eliminate up to 75 percent of all poisonings of small children.

- Medicines that are no longer being used or that are out-dated, should be disposed of properly. Town has prescription drug disposal days, check health department's website: www.darienhealth.com
- If you spill a chemical, clean it up immediately with rags, being careful to protect your eyes and skin. Allow the fumes in the rags to evaporate outdoors in a safe place, then dispose of them by wrapping them in a newspaper and placing them in a sealed plastic bag. Dispose of these materials with your trash.

HAZARDOUS MATERIALS & CHEMICAL SPILLS

We use hazardous materials such as cleaners, germicides, deodorizers, detergents, drain and bowl cleaners, gases, home medications, laundry bleaches, liquid fuels, paint removers and thinners in our homes and businesses every day.

Large spills occasionally occur, but these incidents generally cause the public little difficulty other than traffic delays. In the event of a major spill authorities will instruct you on the best course of action. However you should heed the precautions listed below.

CHEMICALS - TOXIC POISONING

Learn to recognize the symptoms of toxic poisoning:

- Difficulty in breathing
- Irritation of the eyes, skin, throat, or respiratory tract
- Changes in skin color
- Headache or blurred vision
- Dizziness
- Clumsiness or lack of coordination
- Cramps or diarrhea

TOXIC POISONING GUIDELINES

- Stay upwind of the material if possible.
- Seek medical attention as soon as possible if needed.
- If there's an event indoors, try to get out of the building without passing through the contaminated area. Otherwise, it may be better to move as far away from the event as possible and shelter in place.
- If exposed, remove outer layer of clothes, separate yourself from them, and wash yourself.
- In some circumstances, after being exposed to hazardous materials, it may be necessary to be "decontaminated." Specially trained emergency personnel will perform decontamination procedures, which may include the removal of personal items and cleansing of exposed areas of the body. They will provide for medical attention if necessary.

CARBON MONOXIDE

Carbon monoxide (CO) is a colorless and odorless gas that can be produced by improperly vented furnaces, plugged or cracked chimneys, water heaters, fireplaces, stoves and vehicle or engine exhaust.

- Dangerous levels of carbon monoxide can injure or kill.
- Symptoms of CO poisoning, besides tightness across the chest, are flu-like, and may include headache, dizziness, drowsiness and/or nausea.
- Since CO has no color, taste or smell, CO detectors are the only way to alert you to increasingly dangerous levels of CO before tragedy strikes.
- Experts strongly urge that you install CO detectors in your home, apartment, boat or RV.

IF YOU SUSPECT CARBON MONOXIDE POISONING

- Get yourself and victims to fresh air immediately
- Call 911
- Call your local utility.

COUNTERING TERRORISM

A terrorist's primary objective is to create fear. With accurate information and basic emergency preparedness, you can fight back. Keep in mind that accidents can sometimes appear to be terrorist events and vice versa. Your response should be similar in either case.

KNOW THE FACTS AND BE RESPONSIBLE

- Know the facts of a situation and think critically.
- Confirm reports using a variety of reliable sources of information, such as the government or media.
- Do not spread rumors.
- Do not accept packages from strangers and do not leave bags or luggage unattended in public areas such as a library or train station.

EXPLOSIONS

See *Building Collapses & Explosions* on page 10.

BIOLOGICAL ATTACKS

- A biological attack occurs when a terrorist intentionally causes a disease epidemic.
- See *Disease Outbreaks and Biological Events* on page 13.

CHEMICAL ATTACKS

- The intentional release of hazardous materials constitutes an act of terrorism, however accidents involving hazardous materials may also occur. Your course of action should be the same in either case.

See *Hazardous Materials & Chemical Spills* on page 11.

RADIOLOGICAL ATTACKS

- Radiological attacks occur when radioactive material is intentionally released.
- Radiological Dispersion Device (RDD): An RDD is designed to scatter amounts of radioactive material over a wide area. The farther the material disperses, the less harmful it is. In most cases, the amount of material is unlikely to be lethal.
- "Dirty Bomb": A Dirty Bomb is a kind of RDD that combines conventional explosives and radioactive material. The explosive is intended to scatter the radioactive material. More damage and casualties may result from the explosion than from the radiation itself.

Also see *Radiation Exposure* on page 13.

IDENTIFYING SUSPICIOUS PACKAGES, PARCELS OR LETTERS

A parcel or letter may be considered suspicious when it has one or more of the following characteristics:

- Handwritten or poorly typed address, incorrect titles or titles with no name, or misspellings of common words.
- Addressed to someone no longer with your organization or not addressed to a specific person.
- Strange return address or no return address.
- Marked with restrictions, such as "Personal," "Confidential" or "Do not X-ray."
- Excessive postage or no postage at all.

- Powdery substance on the outside.
- Unusual weight given its size, lopsided, or oddly shaped.
- Unusual amount of tape on it.
- Odors, discolorations or oily stains.

IF YOU RECEIVE A SUSPICIOUS PARCEL, PACKAGE OR ENVELOPE

- **Put it down** on the floor or a flat surface.
- **Do not attempt to open** the package or parcel for any reason, shake it, handle it excessively or aggressively.
- Cover it with an airtight container like a trash can or plastic bag.
- Call 911 and alert your building's security officials.
- Alert others to the presence of the package and evacuate the area.
- Once the household has been evacuated, do not re-enter your home until it has been determined safe to do so.
- Wash your hands with soap and water if you have handled the package.
- Be prepared to provide as much detailed information as possible to local authorities. Provide details of the room or area where the suspicious package was recognized.
- Make a list of the people who were in the room/area where the suspicious package was recognized, and give the list to authorities.

IF YOU RECEIVE A BOMB THREAT

- Keep the caller on the line for as long as possible and try to write down or record the conversation.
- Write down the exact time and length of call.
- Listen carefully to the caller's voice and background noise.
- Ask the caller as many of the following questions as possible:
 - 1) Where is the bomb right now?
 - 2) What does the bomb look like?
 - 3) When is the bomb going to explode?
 - 4) What kind of bomb is it?
 - 5) Why did you place the bomb?
 - 6) Where are you calling from?
- After you hang up: *call 911 immediately.*

IF YOU HAVE INFORMATION ABOUT POTENTIAL TERRORISM: call Darien Police at (203) 662-5300.

Or

If You See Something Suspicious,
Say Something!

1-866-HLS-TIPS
For Connecticut's Homeland Security

RADIATION EXPOSURE

If an accident or explosion were to release radiation, local authorities would notify the residents through approved alerting methods. They would also instruct you through the Emergency Alert System on local radio and regional television stations about areas affected and how to protect yourself.

- In the event of an accident or explosion, radioactive gases and particles may be carried in the air in a cloud-like formation called a plume.
- The area affected by a plume is determined by wind direction, speed and weather conditions.
- In the unlikely event that any part of Darien is exposed to unsafe levels of radiation, there are steps you can take to reduce your exposure.

TO ASSESS THE SITUATION

- Listen carefully to emergency warnings and news reports.
- Determine whether you are in fact at risk of exposure.
- Take protective action that is consistent with the threat.
- If you are safe where you are, stay put. Highways will likely be crowded with people needing to move to safety.

TO MINIMIZE RADIATION EXPOSURE

Indoors:

- Go as far below ground as possible, close windows and doors, turn off air conditioners, heaters or other ventilation systems.
- Stay where you are, listen to the radio, watch TV or check the Internet for official news.

See also *Shelter In Place on page 7.*

Outdoors:

- **Get inside.** Remove all clothing and wash yourself thoroughly to remove radioactive particles as soon as possible.
- **Shielding:** Put as much heavy, dense material between yourself and the radiation as possible. For this reason authorities may advise you to stay indoors, close and seal windows, (as much as possible) and turn off powered ventilation to restrict incoming contaminated air.
- **Distance:** The greater the distance between you and a radiation plume the better. For this reason authorities may call for evacuation only of people in closest areas.
- **Time:** Radioactive materials become less radioactive over time. Stay inside until authorities advise you the threat has passed.

TREATMENT

- In the unlikely event of radiation exposure, the Town may distribute Potassium Iodide (known as KI). This is a kind of salt that can prevent damage to your thyroid gland only if you are exposed to radioactive iodine. It will not help you in other radioactive environments. KI is generally only recommended for children, adolescents, pregnant women and others with growing thyroids. Only one dosage should be taken every 24 hours.

DISEASE OUTBREAKS & BIOLOGICAL EVENTS

There are treatments for many diseases and biological agents.

- The Town of Darien has established plans for responding to potential situations involving disease outbreaks and biological events in cooperation with State and Federal agencies.
- The Town may distribute medicine or a vaccine to those who are at risk. This course of action will be decided based on the specific health hazard.
- The type of therapy or treatment used, if any, for a specific infection or disease may vary depending on each person's unique physiology, lifestyle and general health.
- To distribute treatment or vaccines, the Town may open Points of Dispensing (POD) locations where treatment will be provided. In the event that POD's are activated, find the one closest to you by listening to radio, TV, the Town website or the Town Info-line at 203-656-7472.

UNUSUAL OR SUSPICIOUS SUBSTANCES

- If you become aware of an unusual and suspicious substance nearby:
- Quickly get away from the item or material in question.
- Protect yourself. Cover your mouth and nose with layers of fabric that can filter the air but still allow breathing. Examples include two to three layers of fabric such as a t-shirt, necktie, handkerchief or a towel.
- Wash your hands thoroughly with soap and water.
- Call 911
- Check TV, radio or Internet for official news and information about who may have been placed at risk, what the signs and symptoms of the disease are and where you should seek medical attention if directed to do so.

WHAT IS PANDEMIC FLU?

A “pandemic” is a disease that spreads all over the world and affects a large number of people. If you are caring for a loved one at home during a pandemic, it’s important to take steps to protect yourself and others. Check www.pandemicflu.gov frequently for up-dates from the Department of Health and Human Services or your local health department at ww.darienhealth.com.

PREVENT THE SPREAD OF PANDEMIC FLU

- The flu virus is spread when contaminated droplets exit the mouth and nose of an infected person and the virus comes in contact with others.
- Clean your hands often with soap and water or alcohol-based hand sanitizer.
 - Cover your mouth and nose with a tissue when you cough or sneeze into your upper sleeve if you don’t have a tissue.
 - Keep your hands away from your eyes, nose and mouth.
 - If you have signs of the flu, stay home from work, school, errands and avoid social contact.
 - Be prepared to shelter at home for an extended time period.
 - Consider wearing a mask when around others.

RECOGNIZE PANDEMIC FLU SYMPTOMS

Fever and chills, cough, sore throat, runny or stuffy nose, muscle pain, diarrhea, extreme tiredness, and headache.

WHEN A HOUSEHOLD MEMBER IS SICK

- Keep everyone’s personal items separate.
- Disinfect door knobs, switches, handles, toys and surfaces.
- Wash clothes in very hot water and detergent.
- Wear disposable gloves.
- Designate one person as caregiver, he or she may benefit by wearing a mask when giving care.

Disinfectant recipe:

1 gallon water

1/4 c. bleach

Mix up a fresh batch every time you use it

CARING FOR A LOVED ONE WITH THE FLU

- Monitor Symptoms in a care log.
- Prevent dehydration by giving plenty of liquids, ice and easily digested foods, such as soup and broth.
- If there is diarrhea or vomiting give fluids that contain electrolytes.
- Reduce fever with medications such as acetaminophen, aspirin or ibuprofen as directed on the container’s label. Do not give aspirin to anyone younger than 20 years old. To relieve discomfort, give a sponge bath with lukewarm water.

CALL A HEALTHCARE PROFESSIONAL IF:

- You or a family member has the following symptoms;
- High fever.
 - Shaking chills.
 - Coughing that produces mucus.
 - Dehydration.
 - Worsening of an existing serious medical condition.

CALL 911 IF:

- You or a family member has the following symptoms;
- Irritability and/or confusion.
 - Difficulty breathing or chest pain with each breath.
 - Bluish skin.
 - Stiff neck.
 - Inability to move and arm or leg.
 - First time seizure.

PREPARE FOR A FLU PANDEMIC

Make a plan now for a flu pandemic. What will you do if members of your household have to stay home from work or school or stay separated from others for an extended period of time? **Keep extra supplies of food, water, medications and your disaster supply kit on hand.** You may be asked to stay at home for an extended period of time even though you are not sick.

CAREGIVING SUPPLIES:

- Thermometer.
- Soap.
- Disposable gloves.
- Acetaminophen.
- Ibuprofen.
- Bleach.
- Alcohol-based hand sanitizer.
- Surgical masks.
- Sugar, baking soda, salt, salt substitute.
- Paper Towels.
- Tissues.

FOR MORE INFORMATION DURING A PANDEMIC VISIT www.darienhealth.com, OR CONTACT THE HEALTH DEPARTMENT AT 203-656-7320 OR LISTEN TO YOUR LOCAL RADIO STATION.

- Ambulance/EMS
- Fire
- Police

Call 911

- If you are in **immediate danger**.
 - If you witness a **crime in progress**.
 - For a **serious injury** or **medical condition**.
 - For any situation needing **urgent attention**.
- Do not call 911 for non-emergencies** or to report a utility outage (to keep lines free for emergency calls).

For Non-Emergency Information:

Ambulance/EMS | (203) 655-8989

Fire: Darien Fire Department (203) 655-1216

Noroton Fire Department (203) 655-0653

Noroton Heights Fire Department (203) 655-1033

Police (203) 662-5300

When You Call 911...

State:

1. Your Name
2. Address of the emergency
3. Nature of the emergency (fire, medical or police)
4. Age and sex of the injured/patient
5. Then be prepared to answer questions.
6. Do not hang up until you are told to.

- During a medical emergency turn on exterior light(s) so emergency responders can find your home.
- During disasters use the telephone only when necessary, so phone lines are free for emergency calls

UTILITIES DISRUPTIONS

Utilities disruptions are an occasional inconvenience of the modern age.

IF YOU SMELL GAS: Dial 911 away from odor

- Do not operate any electrical appliance or switch.
- Do not use a telephone.
- Do not light a match or smoke.
- Open windows and doors to ventilate area.
- From outside the building, call **Yankee Gas at 800-992-3427** or your propane vendor.

IF THERE IS A POWER OUTAGE

- Call **CL&P** (Northeast Utilities) immediately to report the outage at **1-800-286-2000**.
- For the hearing- or speech-impaired, call CL&P at 1-800-842-0010 using a TTY/TDD telephone.
- Disconnect or turn off all appliances that would otherwise go on automatically when service is restored. If several appliances start up at once, they may overload the electric circuits.
- In order to prevent food spoilage, keep refrigerator and freezer doors closed as much as possible. Each time the door is opened, heat enters and speeds up the thawing process.
- Stay indoors if possible. If you must go outside, stay away from downed and dangling power lines. Treat all downed lines as if they are dangerous.
- Keep a battery-operated radio on for updates on service restoration.
- If you lose power and/or heat in the winter, insulate your home as much as possible.
- Do not burn charcoal indoors and do not use your kitchen gas range to heat rooms as this can lead to fire or hazardous carbon monoxide conditions.
- Do not use generators indoors since without proper ventilation they can create dangerous carbon monoxide.

IF YOU DON'T HAVE HEAT

- If you do not have heat, contact your building owner. If heat is

not restored, call Dept. of Public Health 656-7320 during normal business hours or the Police Dept. at 662-5300 after normal business hours.

IF YOU LOSE PHONE SERVICE

- Use your cell phone, or borrow one from a friend or neighbor if possible, and call your provider to report the outage.
- If you have a cordless phone, keep in mind you may lose service during a power outage. Internet based phones will not work either upon loss of internet or power outage without back-up power like a Universal Power Supply. It is a good idea to have a phone that does not rely on electricity.
- Fire alarm boxes will continue to work.

PROBLEMS WITH WATER OR SEWER

- It is always a good idea to keep a supply of bottled water in the house.
- If you see water coming up from the ground or roadway, or suspect a water main break, call the **Darien Public Works Dept. at (203) 656-7346**. Be prepared to provide the following information on the phone: a description of the condition, what is being affected (street, cellar, basement, subways, etc.), the exact location of the problem, and your name, address and telephone number.
- If you have no water or very low water pressure, call **Aquarion Water Company of CT at (203) 445-7310**.
- If there is a concern about drinking water quality, you will be advised of what actions to take. In some cases, you might be told not to use the water for cooking or drinking purposes unless it is boiled, treated with bleach or iodine, or disinfected by other means.
- If there is a drought, authorities will advise you to conserve water. Please restrict your water use as much as possible. If the drought worsens, mandatory drought restrictions can be imposed. Conservation measures can slow the depletion rate of the stored water and potentially postpone or eliminate the threat
